

INTRODUCTION

This is a software which runs a store specializing in products for users to buy online. There is a rise in the demand for such these products and we hope to cater to this market. Our customers may use the software to browse through the products in our catalogue and select individual products very easily. The bill may be generated very easily and efficiently.

AIMS

The main aim of this project is to help the staff to buy items online easily, making it less time consuming and less tiring for the user with the computerized system.

OBJECTIVES

- ❖ Providing a delightful and memorable customer experience.
- ❖ Complete hassle free shopping experience.
- ❖ To highlight the convenience of e-commerce to traditional offline shoppers and help grow the market.
- ❖ Retrieval of data should be swift and effortless.
- ❖ Ensure that the computerized system is cheaper than manual system.

MANUAL SYSTEM

- In the manual system the information about each product is recorded in large and cumbersome registers and requires huge amount of paperwork and it is time consuming.
- Modifying records will require more time and effort as the whole information should be re-written.
- Retrieving records will be extremely difficult as one has to go through the previous records.

ADVANTAGES OF MANUAL SYSTEM

- The staff know their job very well and are well settled.
- No technical/computer knowledge is required.
- Check the quality of the product before buying it.
- Low installation cost.
- Salesman's reviews are available.

DISADVANTAGES OF MANUAL SYSTEM

- Retrieval of individual record is time consuming.
- Limited range of products.
- Report making is difficult.
- Modifying records will be strenuous and time consuming.
- Inconvenient as one has to visit the shops.

COMPUTERIZED SYSTEM

The computerized system as mentioned earlier, aims at simplification and increasing the efficiency of the manual system. The programs can be used to enter, store, manipulate the products. Using the computerized system makes it easier for the user to maintain the stock.

ADVANTAGES OF COMPUTERIZED SYSTEM

- The program is user friendly and requires no special training.
- It is highly efficient and records can be updated in no time.
 - Reports can be generated to maintain the transaction.
- Huge range of products available and saves time.
- The program is small and does not require much space on the hard disk.
- There is no sales pressure and easy price comparisons.

DISADVANTAGES OF COMPUTERIZED SYSTEM

- Although the program is known to be simple but the discovery of any error cannot be corrected by the user himself.
- Viruses are always a threat to any computer based system and can cause the loss of data, so special care must be taken to protect the system from viruses.

First Button

First button allows us to navigate to the first product.

Previous Button

Previous button allows us to navigate to the previous product.

Next Button

Next button allows us to navigate to the next product.

Last Button

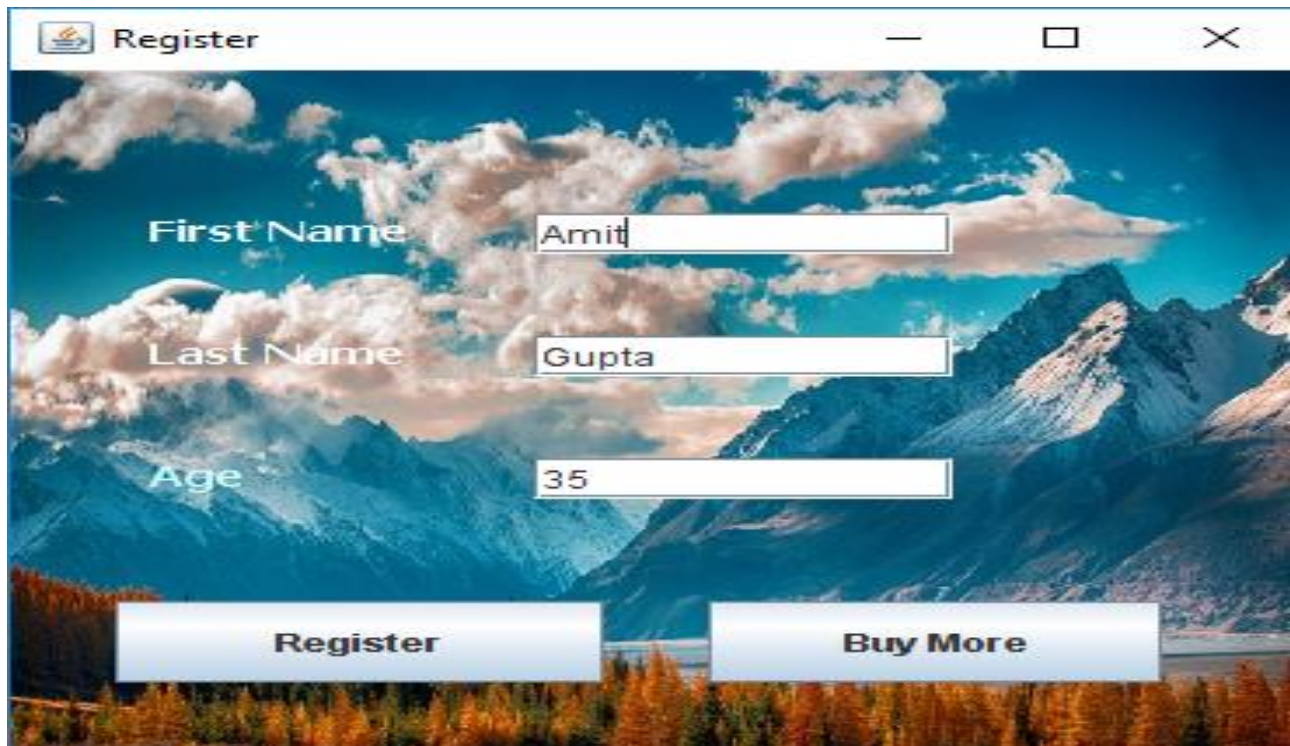

Last button allows us to navigate to the last product.

Calculate Button

Calculate button allows us to calculate the bill.

Buy Button

Buy button allows us to purchase the current product.

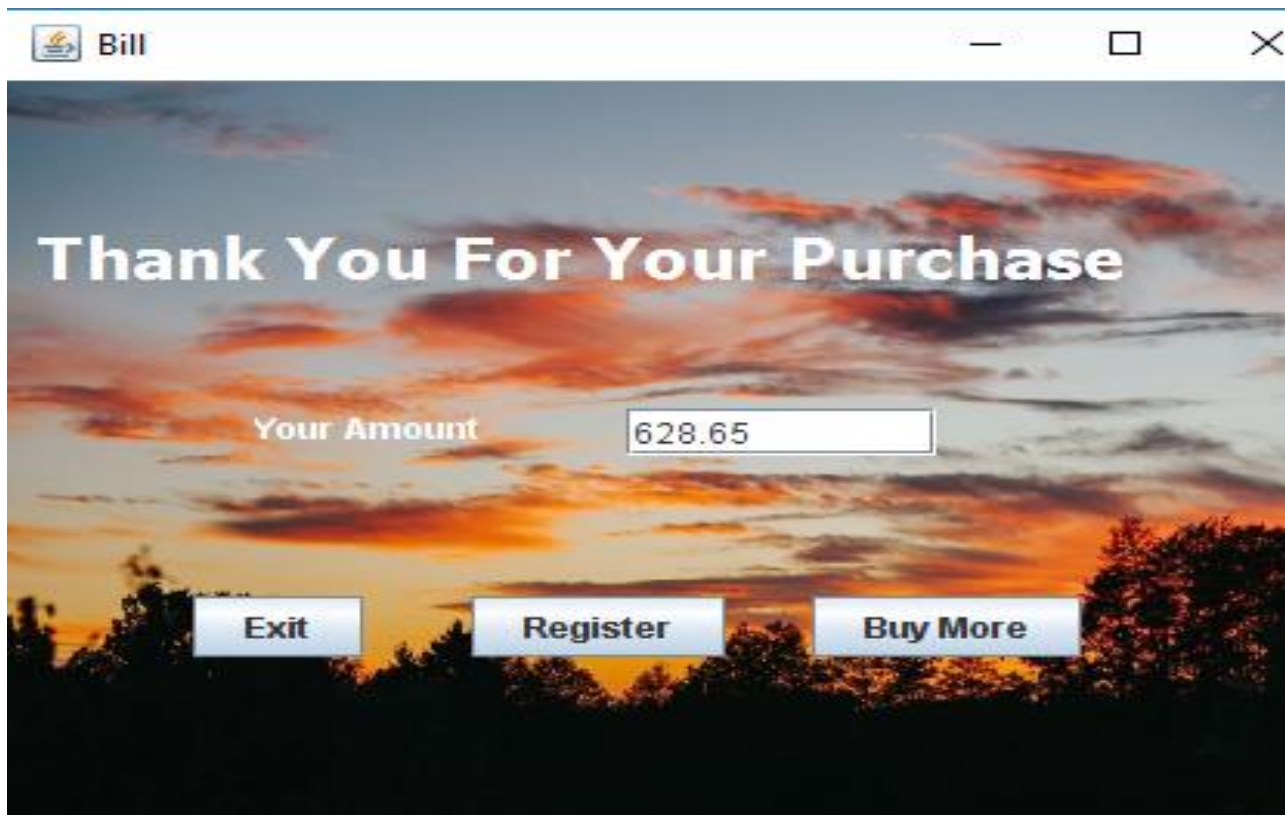

Register Button

Register Button allows user to add his/her details in the program.

Buy More Button

Buy More button allows the user to buy more items by redirecting the frame to the log in page (Jframe2).

Exit Button

Close button allows us to exit the application.

Buy More Button

Buy More button allows the user to buy more items by redirecting the frame to the item selection page (Jframe3).

Register Button

Register button redirects the frame to the register frame(Jframe8) allowing user to register his/her details in the program.
